A photograph showing four different types of plastic recycling machines in a studio setting. From left to right: a small manual shredder, a manual extruder on a stand, a manual injection molding machine, and a large industrial-grade hydraulic press. In the foreground, there are several small plastic containers and a long, thin extruded plastic piece. To the right of the press, two large, colorful, textured panels are leaning against it. A large yellow banner with the text "PRECIOUS PLASTIC" is overlaid on the bottom center of the image.

PRECIOUS PLASTIC

The Shredder

- This shreds all the plastic for everything else.

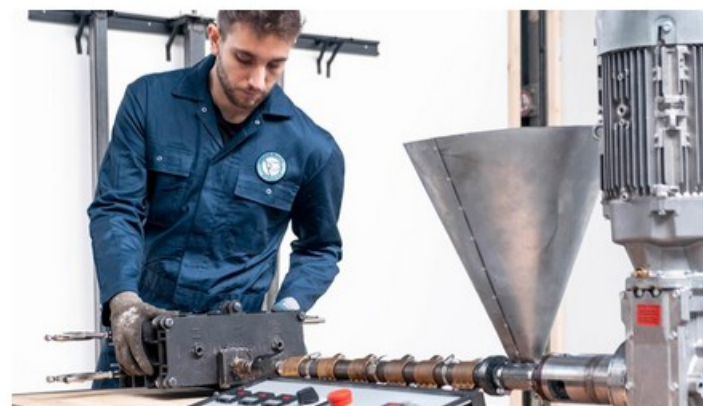

The Extruder

- This pushes the plastic into a mold

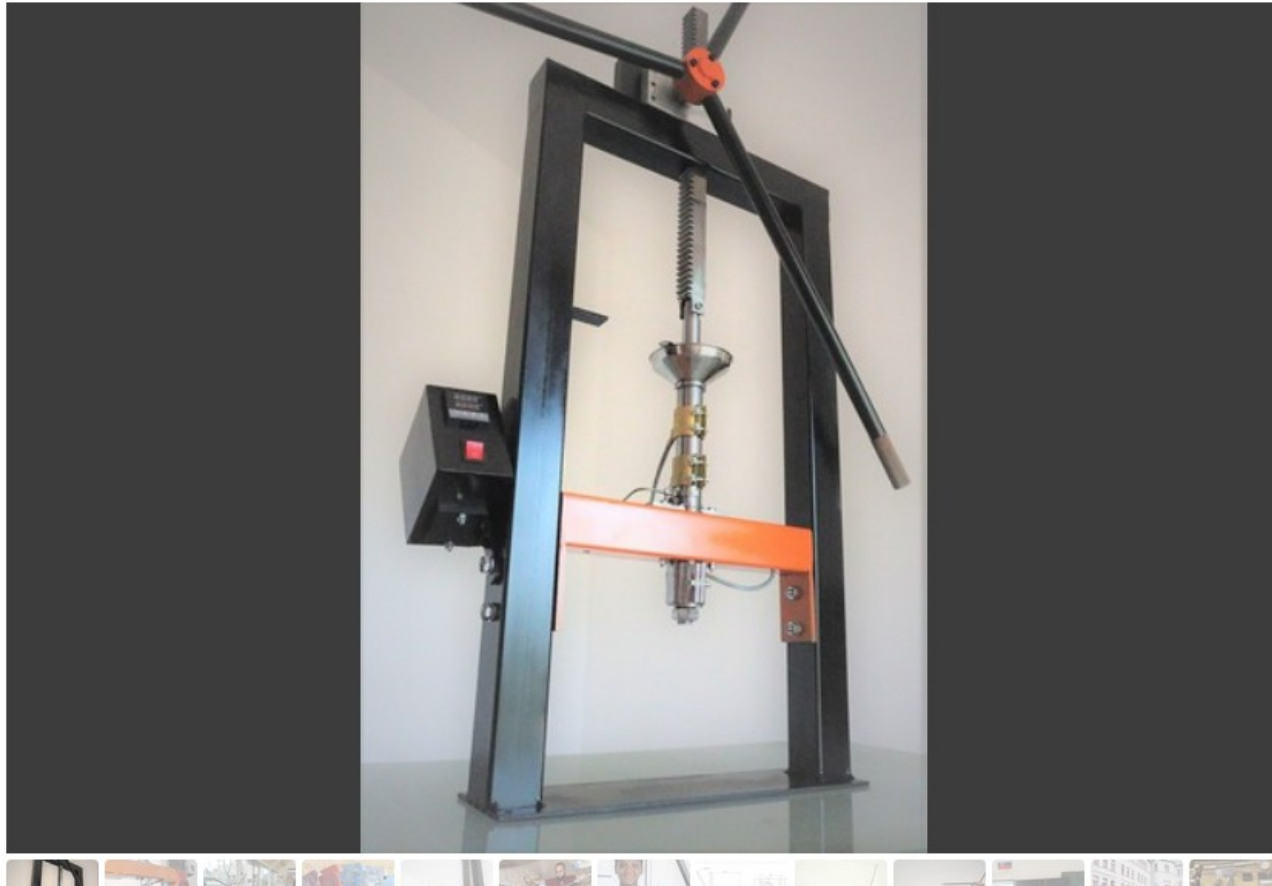

The Mold Press

- This pushes the plastic into a mold

The Sheet Press

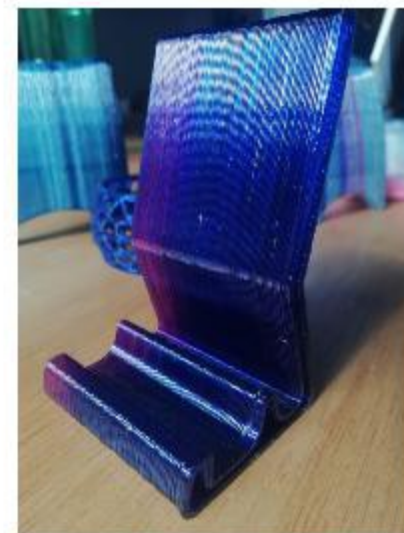

- This makes flat plastic sheets

The 3D Printer

- This prints the plastic

**Lots of 3d printed parts
can be made**
